ENDOSCOPY PRODUCTS

REUSABLE - ENDOSCOPY ARC™ CHANNEL BRUSHES

The Brush head is electronically welded and will NOT separate from the sheath.

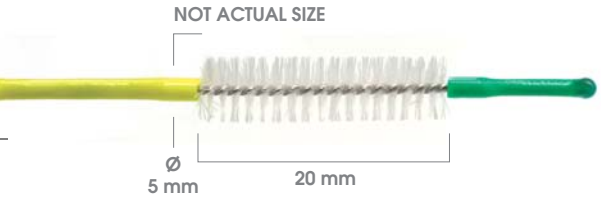
REUSABLE ARC™ CHANNEL BRUSHES - DAYBRUSH™

BATRIK has developed a disposable channel brush that can be used for cleaning endoscopes for an entire day. You no longer need to worry if your current reusable brush is cleaning effectively. After processing ten (10) endoscopes(1), simply discard the brush.

The unique structure of the Reusable DayBrush™ enables the following:

- Soft tip ensures easy manipulation within the channel with no risk of damage.
- The back-end is sealed and softened to prevent fluid from getting trapped inside the tube. The softening process also prevents damage if the cleaning brush is used in reverse.
- Can be steam sterilized.
- The volume of bristles on the DayBrush™ is 20mm in length - almost double most other brushes. A large brush provides more surface contact during the cleaning process.
- The **BATRIK ReusableDayBrush**™ has been tested to effectively clean up to 10 scopes(1).
- Significant per use savings when compared to re-usable or disposable channel cleaning brushes.

(1) Discard after cleaning 10 scopes or sooner if any brush degradation is noticed. After ten applications the brush MAY have the appearance that it can still effectively clean, but we discourage prolonged use due to risk of cross contamination.



5 MM CYLINDRICAL DAYBRUSH™

ITEM NO.	LENGTH INCHES / CM	BRUSH LENGTH INCHES / MM	BRUSH (Ø) INCHES / MM	SHEATH (Ø) INCHES / MM	BRUSH ENDS
